## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Glover et al. P.N. 4,613,949(Glover).

Glover discloses the use of a composite pulse for time reversal in Magnetic Resonance Imaging. Applicant's attention is directed to Fig. 2 and corresponding description. At least two 90 degree RF pulses are used in an imaging sequence that have different spatial characteristics. See 30a, 30b and 30c. Note that the composite RF pulse is generated with an orthogonal inductor system as described on the first paragraph of col. 6. The longest of the relaxation time constants as used in Glover is the spin-echo relaxation constant also known as T2. Thus spin echo response signal e.g. 35 is produced by the combined effect of composite pulses 30a, 30b and 30c.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nishimura and Shaka disclose methods for correcting the effect of RF pulse inhomogeneity in Magnetic Resonance experiments. Note the abstract and background of the invention for each disclosure.
